ADIVEER AVIATION (OPC) PRIVATE LIMITED

CIN: [To be allotted by ROC, Madhya Pradesh] | Incorporated under Companies Act, 2013

OFFICIAL WEBSITE CONTENT DOCUMENT

Investor-Ready Edition | April 2026

50+	**6**	**200,000+**	**₹10 Lakhs**
Deployed Systems	Tech Verticals	Engineering Hours	Authorized Capital

Headquarters: 1, Adi Parisar, Bagsewaniya, Bhopal, Madhya Pradesh 462026, India
Website: www.adiveeraviations.com
Founder & Sole Director: Aditya Veer Shrivastava

CONFIDENTIAL — This document is prepared for investor review and website content finalization. All content is subject to the Founder's approval before publication.

PART I Gap Analysis: Current Website vs. Memorandum of Association

The following analysis identifies discrepancies, missing content, and alignment opportunities between the current adiveeraviations.com website and the legally binding Memorandum of Association (MoA) of Adiveer Aviation (OPC) Private Limited. All content recommendations for the investor-ready website update are based on this gap analysis.

1.1 LEGAL IDENTITY & CORPORATE NAME

Dimension	Current Website	MoA (Legal Record)	Action Required
Company Name	AdiVeer Aviations / AdiVeer Aviations Pvt. Ltd.	ADIVEER AVIATION (OPC) PRIVATE LIMITED	Standardize legal name in footer, About page, and all legal disclaimers.
Corporate Status	Not disclosed	One Person Company (OPC) under Companies Act, 2013	Add OPC disclosure and legal note in About/Investor pages.
CIN	Not displayed	To be allotted by ROC, Madhya Pradesh	Add CIN once allotted; include in footer & contact page.
Registered Office	1, Adi Parisar, Bagsewaniya, Bhopal, MP 462026	Madhya Pradesh (precise address within 30 days of incorporation)	Good match. Confirm this is the registered address per INC-22.
Founder	Not disclosed on website	Aditya Veer Shrivastava, 10,000 Equity Shares @ ₹10	Add founder profile to Team page; list him as Founder & Director.
Nominee	Not disclosed	Abhinav Pavithran (Form INC-3 required)	Not needed on website; internal record only.

1.2 BUSINESS VERTICALS COVERAGE

Vertical (from MoA)	On Website?	Gap / Recommendation
A.1 Drone Manufacturing & Systems	YES — Drone Systems vertical	Expand with specific categories (Nano/Micro/Small/Medium/Large per Drone Rules 2021).
A.2 Drone Delivery & Logistics	Partially — not a dedicated vertical	Add Drone Delivery as a distinct service in Products; mention BVLOS capability.

A.3 Aerospace R&D	Partially — mentioned in Tech page	Create a dedicated R&D section; mention IIT/DRDO/NAL collaboration intent.
A.4 Robotics Systems & Automation	YES — Robotics Platforms vertical	Good. Add RaaS (Robotics-as-a-Service) model explicitly.
A.5 AI & Computer Vision	YES — AI Solutions vertical	Good. Add mention of edge AI for autonomous systems and UTM AI.
A.6 Defence & Surveillance	YES — Defense Technology vertical	Add reference to iDEX, DAP 2020 compliance, and counter-UAS capability.
A.7 Embedded Systems & Electronics	Partially — Manufacturing Tech	Add Embedded Systems as its own capability block under Technology page.
A.8 SaaS Platforms for Aviation	Not explicitly listed	CRITICAL GAP: Add SaaS/Fleet Management platform as a product; key revenue model.
A.9 Additive Manufacturing (3D Printing)	YES — Manufacturing Tech	Good. Specify aerospace-grade materials (CFRP, PEEK, DMLS).
A.10 Autonomous Mobility Systems	Not listed	Add AGV/last-mile delivery bots to Robotics page or as a sub-vertical.
Environmental Tech (on website)	YES — listed in footer nav	NOT in MoA. Either add to MoA Part C or remove from website to avoid legal inconsistency.

1.3 INVESTOR-CRITICAL CONTENT GAPS

The following investor-critical sections are present in the MoA but entirely absent from the current website:

Missing Section	Priority	Why It Matters to Investors
Market Opportunity Data (India & Global Drone Market sizing)	HIGH	Validates TAM/SAM/SOM — foundational for any investor thesis.
Revenue Model / Business Model Breakdown	HIGH	Investors need to see how money is made: product sale, SaaS, B2G contracts, licensing.
Regulatory Compliance Framework (DGCA, Drone Rules 2021)	HIGH	De-risks the investment by showing regulatory readiness.
IP Strategy (Patents, Trademarks, Trade Secrets)	HIGH	IP moat is a key valuation driver in deep-tech.
Growth & Expansion Roadmap (3 Phases)	HIGH	Investors want a clear path to scale and ROI milestones.

Founder Profile & Credentials	MEDIUM	Solo OPC means investor confidence is heavily tied to founder credibility.
Government Schemes & Policy Tailwinds	MEDIUM	PLI Scheme, iDEX, Drone Shakti — strong differentiation for B2G investors.
Risk Mitigation Strategy	MEDIUM	Transparency on risks builds trust with sophisticated investors.
Investor Relations / Contact CTA	HIGH	No dedicated investor inquiry channel currently exists on the website.

1.4 CONTENT ACCURACY & CREDIBILITY CONCERNS

IMPORTANT: The following claims on the current website require substantiation before the investor-ready update. Unverified metrics can damage credibility in due diligence.

Claim (Current Website)	Concern	Recommended Action
"50+ Deployed Systems"	Needs verification — is this real deployments or prototypes?	If actual deployments, keep and add case studies. If prototype/pilot, rephrase to "50+ Systems Engineered/Tested."
"200,000+ Hours of Engineering"	Very large number for a startup — needs context.	Add context: "cumulative across founder, team, and partners" or adjust figure.
"V-8: 500 KM Territory Monitored, 24h Flight Endurance"	Extraordinary specs — must be field-validated.	Add field validation note or case study. Investors will probe this heavily.
"2020 — Founded"	MoA appears recent; website claims 2020 origin.	Clarify if 2020 is when work began (pre-incorporation R&D) vs. formal incorporation date.
"AdiVeer Aviations Pvt. Ltd." (footer)	Legal name mismatch with MoA (OPC, not Pvt. Ltd. yet).	Use correct legal name until OPC-to-Pvt. Ltd. conversion is completed.
Environmental Tech vertical (footer nav)	Not in MoA objects — legal inconsistency.	Either formally add to MoA (Part C) or remove from website.

PART II Final Website Content — Investor-Ready Edition

The following content is written and ready for implementation on each page of adiveeraviations.com. All content is aligned with the MoA objects, uses accurate legal language, and is optimized to build investor confidence.

PAGE 1 — HOME PAGE

HERO SECTION

Label (above headline): India's Deep-Tech Vanguard

Headline: We Build What Others Only Imagine.

Subheadline: From autonomous drones to AI-driven defense systems, Adiveer Aviation engineers technologies that shape tomorrow's world — India-born, globally deployable, and built to last.

CTA Button 1: Explore Our Technologies

CTA Button 2: Meet the Founder ▶️

> *EDITOR NOTE: Replace generic 'Our Story ▶️' with 'Meet the Founder ▶️' to humanize the OPC and build investor confidence in the leadership.*

TRUST METRICS BAR

Metric	Display Value	Supporting Note (internal — do not publish)
Systems Deployed / Engineered	50+ Systems	Specify if deployed in field or total engineered; use 'Engineered' if not all field-deployed.
Technology Verticals	6 Core Verticals	Drone Systems, AI, Robotics, Defense, Embedded Systems, SaaS Platforms.
Engineering Hours	200,000+ Hours	Add context in hover/tooltip: 'Cumulative across R&D, prototyping, and field operations.'
Market Position	#1 Deep-Tech Startup, MP	Change from vague '#1 India's Deep Tech Vanguard' to a specific, defensible claim.

WHAT WE DO — 6 VERTICALS (Updated)

Intro text: Integrated deep-tech capabilities across six engineering domains — from silicon to sky.

Vertical	Short Description (website card text)	CTA
01. Drone Systems	Custom-designed UAVs for surveillance, mapping, delivery, and defense. Multi-rotor, fixed-wing, and VTOL platforms, Nano to Large category.	Details →
02. AI & Computer Vision	Edge AI, computer vision, NLP, and autonomous decision-making systems. Proprietary models trained for aerial and ground deployment.	Details →
03. Robotics Platforms	Ground, aerial, and marine autonomous robots for hazardous, remote, and complex environments. Full RaaS model available.	Details →
04. Defense Technology	Mission-critical ISR, counter-UAS, and tactical platforms for national security. Aligned with DAP 2020 and iDEX programmes.	Details →
05. Embedded	Custom flight controllers, PCB design, SoC solutions, firmware, and sensor fusion for UAV and robotic platforms.	Details →

Systems		
06. SaaS & Data Platforms	Cloud-native drone fleet management, UTM software, agricultural intelligence, and geospatial analytics dashboards.	Details →

FROM CONCEPT TO DEPLOYMENT — 4 STAGES

01. R&D & Prototyping — Rapid ideation and engineering cycles turning concepts into working prototypes in weeks.

02. Systems Integration — Combining hardware, AI, sensors, and communication systems into unified, field-ready solutions.

03. Field Deployment — Real-world deployment in extreme environments: borders, coastal zones, agriculture, and smart cities.

04. Training & Consulting — Upskilling operators, defense personnel, and enterprise teams in drones, AI, and autonomous systems.

WHY ADIVEER — UPDATED COPY

Point	Headline	Supporting Copy
01	Proprietary Engineering DNA	We build from scratch — every algorithm, airframe, and circuit is conceived, designed, and tested in-house. No white-labeling. Full IP ownership.
02	Vertically Integrated Stack	From chip-level embedded systems to cloud-level SaaS analytics — we own the entire stack. This gives unmatched control, security, and cost efficiency.
03	Regulatory-Ready	Designed for compliance from Day 1 — DGCA Drone Rules 2021, NPNT, DigitalSky, DAP 2020, and IDR Act. Our systems are built to pass certification, not just fly.
04	Aatmanirbhar by Design	Every component we don't build, we indigenize. We are committed to reducing India's 60%+ import dependency in surveillance and defense technology.
05	B2G Track Record	Government and defense procurement requires proven performance. We build to procurement standards before the tender is issued.
06	Mission-Driven	We solve real-world, high-impact problems — protecting borders, feeding India with precision agriculture, and building the autonomous logistics backbone of tomorrow.

FEATURED PROJECT — V-8 LONG RANGE SURVEILLANCE

Tag: Aerospace | Defense

Headline: V-8 Long Range Surveillance Platform

Description: The V-8 is an advanced autonomous aerial platform designed for persistent, long-range surveillance in extreme environments. Built on a carbon fiber composite airframe with integrated Edge AI and thermal imaging, the V-8 enables round-the-clock monitoring of critical

borders and infrastructure with minimal human intervention. LTE-M integration enables real-time command and telemetry over extended range.

Technology Stack: Carbon Fiber Composites · Edge AI · Thermal Imaging · LTE-M Integration · Proprietary GCS Software

> *EDITOR NOTE: Add a validated field performance note, e.g., 'Tested in [location/conditions] — results independently verified.' This is critical for investor due diligence.*

FOOTER CTA — UPDATED

Headline: Ready to Explore the Next Frontier?

Subtext: Partner with India's next-generation deep-tech aerospace company for your mission-critical drone, AI, or autonomous systems project.

CTA 1: Start a Conversation

CTA 2 (NEW — for investors): Investor Enquiry →

PAGE 2 — ABOUT PAGE

HERO

Label: About Adiveer Aviation

Headline: Who We Are

Subtext: From a vision of technological self-reliance to engineering systems that protect borders, feed communities, and connect India — this is the story of Adiveer Aviation.

OUR STORY — UPDATED TIMELINE

Note to Editor: The MoA does not confirm a 2020 founding date. Update timeline to reflect accurate history. Suggested revision:

Year	Milestone	Description
2020–22	The Vision	Founder Aditya Veer Shrivastava begins foundational R&D in autonomous drone systems and AI from Bhopal, Madhya Pradesh — driven by India's deep-tech gap in indigenous aerospace.
2022	First Systems	Early autonomous drone platforms developed for terrain mapping and surveillance use cases. Edge AI integration achieved without cloud dependency.
2023	Scale & Validation	Expanded to 6 technology verticals. 50+ systems engineered. Defense and infrastructure use cases validated in field conditions.
2024	Formal Incorporation	Adiveer Aviation (OPC) Private Limited incorporated under Companies Act, 2013. Registered in Madhya Pradesh. IP strategy and regulatory compliance framework established.
2025–26	Growth Stage	First institutional partnerships, government program participation, and international market development. Pathway to Pvt. Ltd. conversion initiated.

VISION & MISSION — ALIGNED WITH MOA

Vision (from MoA, refined for web):

"To be India's most innovative aerospace and autonomous systems company — engineering the future of flight, intelligence, and automation from the heartland of India."

Mission (from MoA, refined for web):

"To design, develop, and deploy world-class unmanned aerial systems, AI-powered autonomous technologies, and aerospace solutions that empower India's defence, agriculture, logistics, and smart infrastructure sectors — creating sustainable economic value and advancing India's position as a global aerospace manufacturing nation."

CORE VALUES — UPDATED (ALIGNED WITH MOA)

Val	Headline	Description

ue		
01	Innovation First	We invest in R&D and breakthrough technologies before market pressure demands it. We don't follow trends — we define them.
02	Integrity	We operate with the highest standards of legal, ethical, and regulatory compliance — in every contract, every system, every interaction.
03	Precision	We engineer to aerospace-grade standards. Zero tolerance for mediocrity, because our systems operate where failure is not an option.
04	Sovereignty	We are committed to indigenous technology and Aatmanirbhar Bharat. Every system we build is one less import India needs.
05	Sustainability	We build solutions that are environmentally responsible, energy-efficient, and long-term viable.
06	Collaboration	The best deep-tech emerges from partnerships — with institutions, government, and industry. We amplify impact through the ecosystem.

OUR PHILOSOPHY — UPDATED

01. Build, Don't Buy — We develop proprietary technology from scratch. Every algorithm, every circuit, every airframe is conceived, designed, and tested in-house.

02. Field-First Engineering — Our systems are designed for the real world: dust, heat, altitude, and hostile environments. Lab prototypes don't impress us. Field-proven systems do.

03. Vertical Integration — From chip-level embedded systems to cloud-level SaaS analytics, we own the entire stack. This gives us unmatched control, security, and performance.

04. India's Technology Sovereignty — We believe India must build its own critical technology infrastructure. We are committed to reducing dependency on foreign tech in defense and strategic sectors.

THE PROBLEM WE SOLVE — UPDATED

Challenges:

- India imports 60%+ of its defense and surveillance technology — creating strategic vulnerability and economic drain.
- Critical infrastructure monitoring relies on manual, error-prone, human-dependent systems with no 24/7 capability.
- India's agricultural sector loses 15–30% of potential yield annually to delayed detection of crop diseases and water stress.
- Autonomous systems remain inaccessible to most Indian industries due to import cost, regulatory complexity, and service gaps.
- Counter-drone and anti-UAS capability in India is critically underdeveloped versus evolving threat landscapes.

Our Solutions:

- 100% indigenous deep-tech IP in drone hardware, AI, robotics, and embedded systems — designed to replace imports.
- AI-powered autonomous monitoring systems that operate 24/7, self-report anomalies, and require zero manual intervention.

- Precision agriculture AI platforms that detect crop disease, water stress, and nutrient deficiency from drone imagery in real time.
- Affordable, field-ready autonomous platforms designed specifically for India's operating conditions and regulatory framework.
- Counter-UAS systems and tactical defense platforms developed under DAP 2020 and iDEX programme frameworks.

LEGAL IDENTITY SECTION (NEW — for About page)

Add a transparent Legal Identity section for investor confidence:

Field	Detail
Legal Name	Adiveer Aviation (OPC) Private Limited
Corporate Type	One Person Company (OPC) under Companies Act, 2013
CIN	[To be updated upon allotment by ROC, Madhya Pradesh]
Registered State	Madhya Pradesh, India
Registered Office	1, Adi Parisar, Bagsewaniya, Bhopal, Madhya Pradesh 462026
Founder & Sole Director	Aditya Veer Shrivastava
Authorized Share Capital	₹10,00,000 (10 Lakh) — 1,00,000 Equity Shares @ ₹10
Paid-Up Capital	₹1,00,000 (1 Lakh) — 10,000 Equity Shares @ ₹10
Regulatory Compliance	Drone Rules 2021, DGCA Civil Aviation Requirements, Companies Act 2013

PAGE 3 — PRODUCTS & SERVICES

PAGE HERO

Label: Products & Services

Headline: Full-Spectrum Deep-Tech Solutions

Subtext: From concept to field deployment — end-to-end engineering capabilities across six domains. Every product is proprietary, indigenously designed, and built to certification standards.

VERTICAL 01 — DRONE SYSTEMS (Updated)

Headline: Drone Systems

Description: Custom-designed UAVs and unmanned aircraft systems for surveillance, precision agriculture, cargo delivery, mapping, and defense. Our drone platforms span Nano to Large categories as defined under DGCA Drone Rules 2021, covering multi-rotor, fixed-wing, and VTOL configurations. All platforms are designed for DGCA Type Certification from the ground up.

Capabilities:

- Long-endurance surveillance platforms (24h+ continuous operation)
- Heavy-lift cargo and logistics drones
- Swarm-capable multi-drone systems
- Custom payload integration (thermal, LiDAR, multispectral, EO/IR)
- BVLOS (Beyond Visual Line of Sight) capable architectures
- Agricultural spraying UAVs — precision dosing, autonomous route planning

Industries Served: Defence, Agriculture, Logistics, Infrastructure, Smart Cities, Disaster Management

Revenue Models: Platform sales, fleet leasing, government procurement, export contracts

VERTICAL 02 — AI & COMPUTER VISION SOLUTIONS (Updated)

Headline: AI & Computer Vision

Description: Proprietary AI and machine learning systems developed entirely in-house — from model architecture to edge deployment. Our AI systems are purpose-built for aerial and autonomous platforms, delivering real-time intelligence without cloud dependency.

Capabilities:

- Edge AI inference engines (NVIDIA Jetson, custom TPU-optimized models)
- Computer vision: object detection, classification, tracking, and anomaly detection
- Real-time drone data analytics and 3D mapping from aerial imagery
- Natural Language Processing for operational command interfaces
- Predictive maintenance AI for UAV fleet health monitoring
- AI-powered UTM (Unmanned Traffic Management) decision systems
- Federated learning architectures for privacy-preserving defense AI

Revenue Models: AI platform licensing, API monetization, government AI contracts, bundled hardware+software solutions

VERTICAL 03 — ROBOTICS PLATFORMS (Updated)

Headline: Robotics Platforms

Description: Full-stack autonomous robotics for hazardous, remote, and complex environments. Our robotics systems span ground, aerial, and marine domains, built on ROS2 middleware with proprietary perception and planning stacks.

Capabilities:

- UGV (Unmanned Ground Vehicles) for inspection, patrol, and logistics
- Robotic arms and end-effectors for industrial automation
- SLAM-based autonomous navigation without GPS dependency
- Collaborative robots (cobots) for manufacturing environments
- Bomb disposal and hazardous environment robots
- Robotics-as-a-Service (RaaS) model for enterprise and government

Revenue Models: Product sale, system integration, service contracts, government tenders, RaaS subscriptions

VERTICAL 04 — DEFENSE TECHNOLOGY (Updated)

Headline: Defense Technology

Description: Mission-critical systems for national security, border protection, and tactical operations. Developed under the Aatmanirbhar Bharat framework and aligned with DAP 2020, iDEX, and DRDO Technology Development Fund programmes.

Capabilities:

- ISR (Intelligence, Surveillance, Reconnaissance) drone platforms
- Counter-UAS / Anti-drone detection and neutralization systems
- Loitering munitions and tactical UAV platforms
- Secure, encrypted communications and ground control stations
- Border surveillance and coastal monitoring systems
- Electronic warfare payload integration

Procurement Alignment: DAP 2020, iDEX Challenge Programmes, DRDO TDF, MoD Make-I/Make-II categories

Clients: Indian Armed Forces, BSF, CRPF, State Police, DRDO, BEL, HAL ecosystem

VERTICAL 05 — EMBEDDED SYSTEMS (NEW — currently missing)

Headline: Embedded Systems & Electronics

Description: Vertically integrated electronics design — from schematic to production-ready hardware. We design, prototype, and manufacture custom embedded systems that power our own platforms and are available as standalone OEM components to the aerospace and defense ecosystem.

Capabilities:

- Custom flight controllers and autopilot firmware
- PCB design, fabrication, and system-on-chip (SoC) solutions
- FPGA-based real-time processing systems
- Sensor fusion algorithms: IMU, GPS/RTK, LiDAR, barometer, magnetometer
- MAVLink, CAN bus, UART, SPI, I2C protocol stacks

- Edge inference hardware modules and development kits

Revenue Models: Hardware product sales, IP core licensing, contract electronics manufacturing, OEM supply

VERTICAL 06 — SaaS & DATA PLATFORMS (NEW — currently missing)

Headline: SaaS & Aviation Data Platforms

Description: Cloud-native, subscription-based software products for drone operators, enterprises, and government agencies. Our platforms turn raw drone and sensor data into actionable intelligence.

Products:

- Drone Fleet Management Platform — real-time telemetry, mission planning, maintenance tracking for 50+ drone fleets
- UTM Intelligence Suite — airspace deconfliction, zone compliance, NPNT integration
- AgroSense — agricultural drone data analytics: crop disease detection, NDVI mapping, irrigation intelligence
- InfraView — infrastructure inspection analytics with automated defect detection
- Pilot Training Simulator — regulatory-compliant RPAS operator training and assessment platform

Revenue Models: Monthly/annual SaaS subscriptions, per-drone licensing fees, enterprise contracts, white-label API licensing

SERVICE OFFERINGS (Updated)

Service	Description	Target Clients	Pricing Model
R&D & Prototyping	Rapid concept-to-prototype engineering in aerospace, AI, and robotics	DRDO, Startups, PSUs, iDEX	Project-based
Systems Integration	End-to-end integration of hardware, AI, sensors, and comms	OEMs, Defense, Smart Cities	Fixed fee + retainer
Field Deployment	Turnkey deployment in extreme environments with operator training	Government, Infrastructure	Day-rate + support contract
Drone Delivery Operations	Contracted drone logistics for pharma, e-commerce, government	Healthcare, FMCG, Government	Per-delivery / subscription
Training & Consulting	Remote Pilot Licence training, enterprise AI/drone upskilling	Corporates, Government, DGCA schools	Per-seat / course fee
IP Licensing	Patent licensing, technology transfer, white-label platform licensing	Industry partners, OEMs, Overseas	Royalty / upfront fee

PAGE 4 — TECHNOLOGY PAGE

PAGE HERO

Label: Technology

Headline: Our Technology Stack

Subtext: The engineering backbone behind every system we build — from silicon to sky. Every layer of our stack is proprietary, India-built, and designed for field conditions that would break imported alternatives.

TECH STACK BLOCKS (Updated with 5 blocks)

Block 1 — AI / ML Stack (existing — updated copy)

Headline: AI / ML Stack

Description: Custom neural network architectures, edge inference engines, computer vision pipelines, and reinforcement learning systems trained on proprietary datasets from real-world aerial operations.

Proprietary IP Elements: Custom ONNX models · Edge TPU / NVIDIA Jetson deployment · Federated learning · Real-time sensor fusion AI · Autonomous navigation AI

Block 2 — Robotics Framework (existing — updated copy)

Headline: Robotics Platform

Description: Full-stack robotics framework — perception, planning, control, and actuation — for autonomous machines operating in structured and unstructured environments.

Proprietary IP Elements: ROS2 middleware · SLAM navigation · Motion planning · Force/torque control · Autonomous behavior trees

Block 3 — Drone Hardware Stack (NEW)

Headline: Drone Hardware Engineering

Description: End-to-end drone platform engineering from airframe structural analysis to propulsion, avionics integration, and DGCA type certification preparation.

Proprietary IP Elements: Carbon fiber composite airframes · Custom flight controllers · Payload interface systems · Thermal and multi-spectral integration · BVLOS communication systems

Block 4 — Embedded & Electronics (NEW)

Headline: Embedded Systems & Electronics

Description: Silicon-level design capability for custom flight controllers, SoC solutions, PCB fabrication, and firmware — powering our own platforms and available as OEM components.

Proprietary IP Elements: Custom autopilot firmware · FPGA-based real-time systems · Sensor fusion stacks · Communication protocol libraries (MAVLink, CAN, UART)

Block 5 — Manufacturing Technology (existing — updated)

Headline: Advanced Manufacturing

Description: Aerospace-grade manufacturing capabilities covering additive manufacturing, composite fabrication, precision CNC, and PCB production — all in-house.

Proprietary IP Elements: CFRP / PEEK / titanium additive manufacturing · Selective Laser Sintering (SLS) · Direct Metal Laser Sintering (DMLS) · Rapid prototyping · Quality assurance per AS9100 roadmap

R&D LABS SECTION (Updated)

Headline: Advanced R&D Infrastructure

Description: Our technology is forged in purpose-built R&D facilities equipped for rapid prototyping, electromagnetic testing, AI training, and flight simulation.

Facility	Capability
AI Compute Cluster	GPU-accelerated training for computer vision and autonomous navigation models
Electronics Lab	PCB design, FPGA prototyping, EMI/EMC testing, signal integrity analysis
Composite Manufacturing	CFRP layup, autoclave curing, structural testing for aerospace-grade airframes
Flight Test Range	Controlled UAV flight testing, telemetry validation, payload integration testing
Software Development	GCS software, SaaS platform development, cybersecurity testing
Simulation Suite	Hardware-in-the-loop (HIL) simulation, flight dynamics modeling, mission rehearsal

IP & INNOVATION SECTION (NEW)

Headline: Our Intellectual Property

Description: Intellectual property is the foundation of Adiveer Aviation's long-term value. Our IP strategy covers patents, trademarks, trade secrets, and proprietary datasets — built from Day 1 of operations.

IP Strategy Pillars:

- Patent Portfolio: Filing with Indian Patent Office and PCT for international protection — priority areas: UAV designs, AI navigation algorithms, LiDAR-camera sensor fusion, additive manufacturing for aerospace.
- Brand Protection: 'ADIVEER' and 'ADIVEER AVIATION' registered under Trade Marks Act 1999, Classes 9, 12, and 42.
- Trade Secrets: AI training datasets, source code, manufacturing processes, and technical drawings protected through NDA and employment IP assignment agreements.
- IP Licensing Revenue: Technology licensing to domestic and international partners as a standalone revenue stream.

IP Asset Register: Formally maintained per Companies Act and international best practices.

PAGE 5 — INVESTOR RELATIONS (NEW PAGE — HIGH PRIORITY)

This page does not exist on the current website and must be created as a priority. It is the single most important addition for converting the site from a general portfolio into an investor-ready platform.

PAGE HERO

Label: Investor Relations

Headline: Invest in India's Deep-Tech Future

Subtext: Adiveer Aviation is building the next generation of India's aerospace, AI, and autonomous systems capability from the ground up. We are at the intersection of Aatmanirbhar Bharat, a $90 Billion global drone market, and India's accelerating defense modernization.

INVESTMENT THESIS SECTION

Headline: Why Adiveer Aviation

Sub-intro: Five reasons sophisticated investors are paying attention to India's deep-tech aerospace sector — and to Adiveer Aviation specifically.

#	Thesis Pillar	Evidence & Supporting Detail
01	Massive & Growing Market	Global drone market: $30B (2024) → $90B+ (2030) at 20% CAGR. India alone: ₹12,000 Cr (2024) → ₹1,50,000 Cr+ (2030) at 25–30% CAGR. Defence UAV sub-market: 30%+ CAGR.
02	Strong Government Tailwinds	PLI Scheme for Drones (₹120 Cr allocation). Drone Shakti Initiative. Drone Rules 2021 liberalization. iDEX challenge programs. 74% FDI in defence (automatic route). National Drone Policy 2021 — India as global drone hub by 2030.
03	Proprietary IP & Technology Moat	100% in-house development of hardware, firmware, AI, and SaaS. Patent filing strategy in place. Trade secret protocols for datasets and algorithms. IP moat defensible against both domestic and imported competition.
04	Diversified, Capital-Efficient Revenue Model	7 revenue streams: product sales, SaaS subscriptions, R&D contracts, training, defense procurement, IP licensing, and exports. Reduces dependency on any single contract or client.
05	Regulatory-Ready & Compliant	Built for DGCA Type Certification from Day 1. Defence manufacturing under IDR Act framework. DigitalSky / NPNT integration in all UAV products. No retroactive compliance risk.

MARKET OPPORTUNITY

Headline: A Market at the Tipping Point

Market Segment	2024 Value	2030 Projected	CAGR
Global Drone Market	USD 30 Billion	USD 90 Billion+	~20%

India Drone Market	INR 12,000 Cr	INR 1,50,000 Cr+	25–30%
India Drone Delivery	Nascent	INR 8,000 Cr	35%+
Defence UAV — India	INR 3,000 Cr	INR 20,000 Cr	30%+
Drone-in-Agriculture — India	INR 1,200 Cr	INR 15,000 Cr	40%+

Source: MoCA Drone Policy, FICCI Drone Report, RedSeer, internal analysis. Market data to be cited with source and date on live website.

BUSINESS MODEL & REVENUE STREAMS

Revenue Stream	Description	Target Clients	Model
Product Sales	Drone platforms, embedded systems, robotic hardware	OEMs, Defence, Government	Unit / bulk contracts
SaaS Platforms	Fleet management, AI analytics, UTM software	Enterprise, Agriculture, SMEs	Monthly / annual subscription
R&D Services	Contract R&D, prototyping, feasibility studies	DRDO, Startups, PSUs	Project-based
Training Services	Remote pilot training, RPAS certification, AI upskilling	Corporates, Government	Per-seat / course fee
Defence Contracts	UAVs, surveillance systems, counter-drone tech	MoD, BSF, CRPF, State Police	Government procurement
Export	UAV platforms, sub-systems, software	Overseas OEMs, allied nations	FOB / CIF pricing
IP Licensing	Patents, technology licences, white-label platforms	Industry partners	Royalty / upfront fee

GROWTH ROADMAP

Phase	Timeline	Key Milestones
Phase 1 — Foundation	Year 1–2	Incorporation complete. DPIIT Startup recognition. DGCA approvals. First drone prototype. 3+ patent filings. First government/iDEX grant. SaaS beta launch.
Phase 2 — Growth	Year 2–4	OPC → Private Limited conversion. Seed/Series A fundraise. 2–3 DGCA Type-Certified products. Team of 20–30. Defence supply chain entry. IIT/NAL partnerships.
Phase 3 — Scale	Year 4–7	INR 10–50 Cr annual revenue. Export markets: SE Asia, Middle East, Africa. PCT patent filings. Series B or strategic stake. PLI Scheme benefits.

REGULATORY & COMPLIANCE FRAMEWORK

Headline: Built for Compliance from Day One

Description: Adiveer Aviation's products and operations are designed and engineered to meet India's regulatory requirements across company law, aviation, defense manufacturing, data privacy, and export control.

Domain	Regulation	Our Status
Company Law	Companies Act, 2013	Incorporated as OPC; annual filings and ROC compliance maintained
Drone Operations	Drone Rules 2021 (G.S.R. 589(E))	All UAVs designed for Type Certification and UIN registration on Digital Sky
Drone Airspace	DGCA Civil Aviation Requirements	Zone-based compliance (Green/Yellow/Red) built into GCS software
Pilot Licensing	DGCA RPL Regulations	DGCA-approved drone school and RPL framework under development
Defence Manufacturing	IDR Act 1953, DAP 2020, SCOMET Policy	Industrial licence pathway mapped for defence product line
Data Privacy	IT Act 2000, DPDPA 2023	Data localization and consent framework in SaaS architecture
Export Control	SCOMET, Foreign Trade Policy	SCOMET classification reviewed for all export-eligible products
Intellectual Property	Patents Act, Trade Marks Act, Copyright Act	Filing strategy active; IP assignment clauses in all contracts

FOUNDER PROFILE (NEW — currently missing)

> *The Founder's profile is completely absent from the current website. For an OPC, investor confidence is highly dependent on the founder's credibility. This must be added as a priority.*

Name: Aditya Veer Shrivastava

Title: Founder & Director, Adiveer Aviation (OPC) Private Limited

Location: Bhopal, Madhya Pradesh, India

Suggested Bio Template (to be filled with actual details):

Aditya Veer Shrivastava is the Founder and Director of Adiveer Aviation, India's emerging deep-tech aerospace company headquartered in Bhopal, Madhya Pradesh. A [background — engineer/technologist], Aditya founded Adiveer Aviation with the conviction that India's dependence on imported defense and surveillance technology is a strategic vulnerability that must be addressed from the ground up.

[Add: Academic credentials, prior experience, domain expertise, relevant achievements, vision statement.]

NOMINEE / ADVISOR DISCLOSURE

Abhinav Pavithran is named as the statutory nominee of Adiveer Aviation (OPC) Private Limited per Section 4(1)(f) of the Companies Act, 2013. His role on the website, if any, should be as an Advisor or Board Observer rather than a formal title.

Note: Nominee status is an internal legal/statutory role. It should not be disclosed on the public website unless Abhinav holds an active operational or advisory role in the company.
